Note: The execution of the works may vary depending on the weather.

WORKING METHOD 'LAWN MOWING' (CLEANING):

Once the hedge trimming is finished, a cleaning of the residual leaves and twigs present in the gardens will be carried out, these vegetal remains are sucked with the lawn mowing machine, but the blades of the machine do not reach to reduce the height of the lawn because the height of the blade is high.

In addition, it is used to mow those areas of lawn that do develop because some owners water some communal areas with their own means or because the lawn is in a shaded area or with better soil conditions and, thus, homogenise the lawn surface.

WORK METHODOLOGY:

- 1.- Hedge pruning, (*Ficus microcarpa*), according to the established order.
- 2.- Mowing and shaping of the lawn, at the same time, any residue generated during the hedge pruning is removed.
- 3.- Insecticide treatment against *Macromotoma gladiata* in hedges of *Ficus microcarpa* previously pruned. **It is recommended:**
 - Do not leave windows open or clothes hanging out during spraying.
 - Do not use sports and children's equipment in communal areas on the day of treatment.
 - Do not walk or play sports on grass surfaces on the day of treatment.

As can be seen in the irrigation water forecast for 2024, there is a very probable risk of exhausting the water reserves of Condado de Alhama before the end of May and, consequently, entering into a water deficit for the rest of the year. Therefore, we have been forced to reduce the number of irrigation days to once a week, as only 10,000 m³ of water is expected to be received during the month of August, although with the new relief measures it will be possible to increase irrigation at the Resort to 3 days a week.

IRRIGATION PLAN FOR THE IRRIGATION SEASON 2024												
Month	J	F	M	A	M	J	JL	AG	S	O	N	D
Water requirements:	2	4	7	13	24	46	76	73	35	29	11	7
ACUAMED Supply:	5	0	10	10	10	10	10	10	10	10	10	10
Annual Water Balance (Forecast 2024)*	18	11	14	11	-3	-39	-105	-168	-193	-212	-213	-210

*(x1,000 m³/month). The above forecast is for information purposes only and may vary depending on the weather or the water requirements of the plant species.
